Organizes National Webinar  
on

### CHANGING PARADIGMS IN PLANT TAXONOMY

6<sup>th</sup> January 2022

Taxonomy is the field of biology that is crucial for understanding the diversity of life on earth. It not only encompasses the identification, description and classification of species but also plays a fundamental role in conservation of biodiversity.

Taxonomy is also essential part of studies related to forestry, horticulture, landscape development, aesthetics and other fields relevant to mankind. Without taxonomy, all other fields of biology will be deprived of their focus and aim. Despite this, the number of trained taxonomists are declining, and the research priorities often shift away from taxonomy.

The primary goal of this webinar is to inculcate the knowledge of both classical and modern tools of taxonomy. The webinar aims to develop knowledge among degree students, research scholars and teaching faculty working in the field of plant biology that can improve the research work and applicability of the branch of taxonomy in various other fields.
